BUTCHING STONE TILES

In making of these Butching Tiles, the edges of the Natural Premium-Limestone Tiles are subjected to a skillful process with certain cutting tools and machinery to achieve the aesthetically pleasing desired finish.

They are often used for the decorative wall coverings in the Interior and Exterior Spaces which includes facades, accent walls, fireplaces, backsplashes and many more.

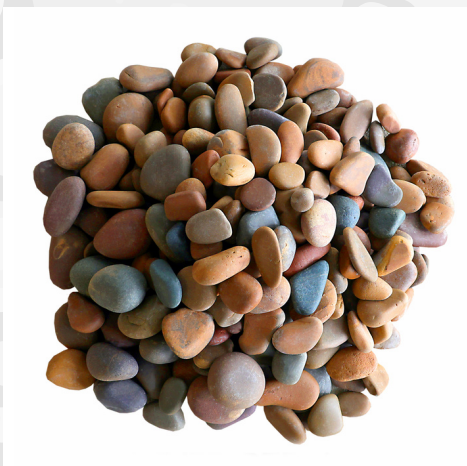

RIVER PEBBLES

River pebbles are rounded and smooth stones that are typically found in riverbeds and along the shores of rivers and streams.

River pebbles are commonly used for decorative purposes in landscaping and garden designing it creates a clean and visually appealing ground cover.

They are often used to create pathways and walkways in gardens or outdoor spaces and also used in water features such as fountains, ponds, and streams to add a natural and soothing element to the landscape.

They are formed through the natural process of erosion, as water continuously shapes and polishes the rocks over time.
